1. Firm Overview

Cincinnati Asset Management (CAM) was established in 1989 to build and manage high performance fixed income portfolios for individuals and institutions. Our conservative and disciplined approach stresses preservation of capital, diversification and high investment income. The Firm's investment process concentrates in the domestic corporate bond market and offers the following portfolios:

Investment Grade

High Yield

Broad Market (*Investment Grade / High Yield Blend*)

Short Duration (*Investment Grade / High Yield Blend*)

Short Duration (*Investment Grade*)

CAM is an independent investment advisor registered with the SEC and structured as a corporation that is employee owned. The strength of our Firm lies with our niche focus, commitment to our investment process and depth of experience of our Managing Directors and employees.

1.1.1. Managing Directors' Profiles

Richard M. Balestra, CFA

Rich started his career with Cincinnati Financial Corporation in 2000. He has significant experience in corporate credit research and has focused on the high yield sector. Rich has held various analyst and portfolio management roles over his tenure and was most recently responsible for \$3.5 billion in firm assets. B.A. Finance, University of Cincinnati; MBA, Xavier University, Williams College of Business Administration.

Richard J. Gardner

Rick began his career with Banc One Funds in 1993. His career also includes portfolio management for The Federal Home Loan Bank and Huntington National Bank, where he managed several corporate and government bond mutual funds. Prior to joining CAM, he was a senior portfolio manager for the \$1.2 billion Ohio Police and Fire Pension Fund. B.S. Finance and Accounting, Wright State University.

Randall S. Hale

Randy started his career with Cincinnati Financial Corporation in 1984. Prior to joining CAM, Randy managed the taxable fixed income portfolio at Cincinnati Financial, an S&P 500 insurance holding company. The \$1 billion portfolio included a significant exposure to high yield securities. Responsibilities included investment strategy, research and trading. B.S. Finance, Olivet Nazarene University.

1.1.1. Managing Directors' Profiles

C. David Mencer, CPA

David began his career in 1966 with the international accounting firm now known as KPMG, where he had extensive experience with broker dealers, mutual funds and insurance companies. In 1977, he joined CNA Insurance as Director of Financial Accounting. Prior to joining CAM, David was Controller for Ohio Casualty Corp. overseeing accounting, financial reporting and planning and investor relations. B.S. Business Administration, West Virginia University.

William S. Sloneker

Bill started his career with Ohio Casualty Insurance in 1976. Prior to CAM, he was a Director and Executive Vice President of Ohio Casualty Corp., responsible for actuarial analysis and the investment of over \$2 billion in common stocks and government, corporate and municipal bonds. B.A. English & Art History, Yale University; MBA Finance & Marketing, University of Pennsylvania, The Wharton School.

Donald N. Stolper

Don began his career with the international investment-banking firm of Warburg Paribas Becker in 1971. He subsequently was a partner of Prudential Securities and L.F. Rothschild. Don was an Executive Vice President and Managing Director of PNC Bank and PNC Capital Markets for ten years prior to engaging in his own financial advisory practice. Throughout his career Don has provided investment banking and financial advisory services to institutions and private clients. B.A. Economics, Amherst College; MBA Finance, New York University.

1.2. Investment Philosophy

As conservative investors, our choice to manage corporate bonds, exclusively, is the result of capitalizing on the structural inefficiencies of the corporate bond market as well as maximizing favorable risk/reward scenarios that exist within domestic fixed income markets. The structural inefficiencies of the corporate bond market are predicated upon two distinct factors: (1) the fragmentation of the market (there is not a central pricing source) and (2) investors' tendency to overreact to events thus providing a mispricing of securities. Specifically, over the long term, corporate bonds have outperformed Treasuries and other fixed income sectors¹.

CAM follows a conservative "bottom-up value" investment discipline that seeks out companies that are currently out of favor with investors, but poised to improve.

The primary focus is preservation of capital with a secondary, but extremely important, emphasis on total return.

Our portfolios are not managed to a benchmark in setting overall portfolio characteristics via tracking error. We believe there are some inherent problems with this process. We do look to outperform respective benchmarks over a full market cycle, but the prime objective is an absolute return.

We do not utilize interest rate anticipation tactics. We look to minimize the impact of macro-economic factors, such as interest rate risk, from the investment process by employing defensive maturity structure within the portfolio.

¹ Period of 1980-2014; Source: Credit Suisse, 2015 Leveraged Finance Outlook and 2014 Annual Review. See Appendix A.

1.3. Investment Process

The process is similar to that of conservative equity value managers. It is driven by the search for inexpensive assets.

- 1st** First, we identify those industry groups and corporations that are trading cheap relative to the market and their historical relationship to the market.
- 2nd** Second, through fundamental credit research, we select those issuers who exhibit asset strength and an appropriate capital structure.
- 3rd** Third, we narrow the candidates by selecting those with the stronger potential to increase revenues and cash flow.
- 4th** Fourth, we further narrow the list through a preference for those remaining candidates that have a better competitive position in their industry group.

These remaining companies form our “focus list.”

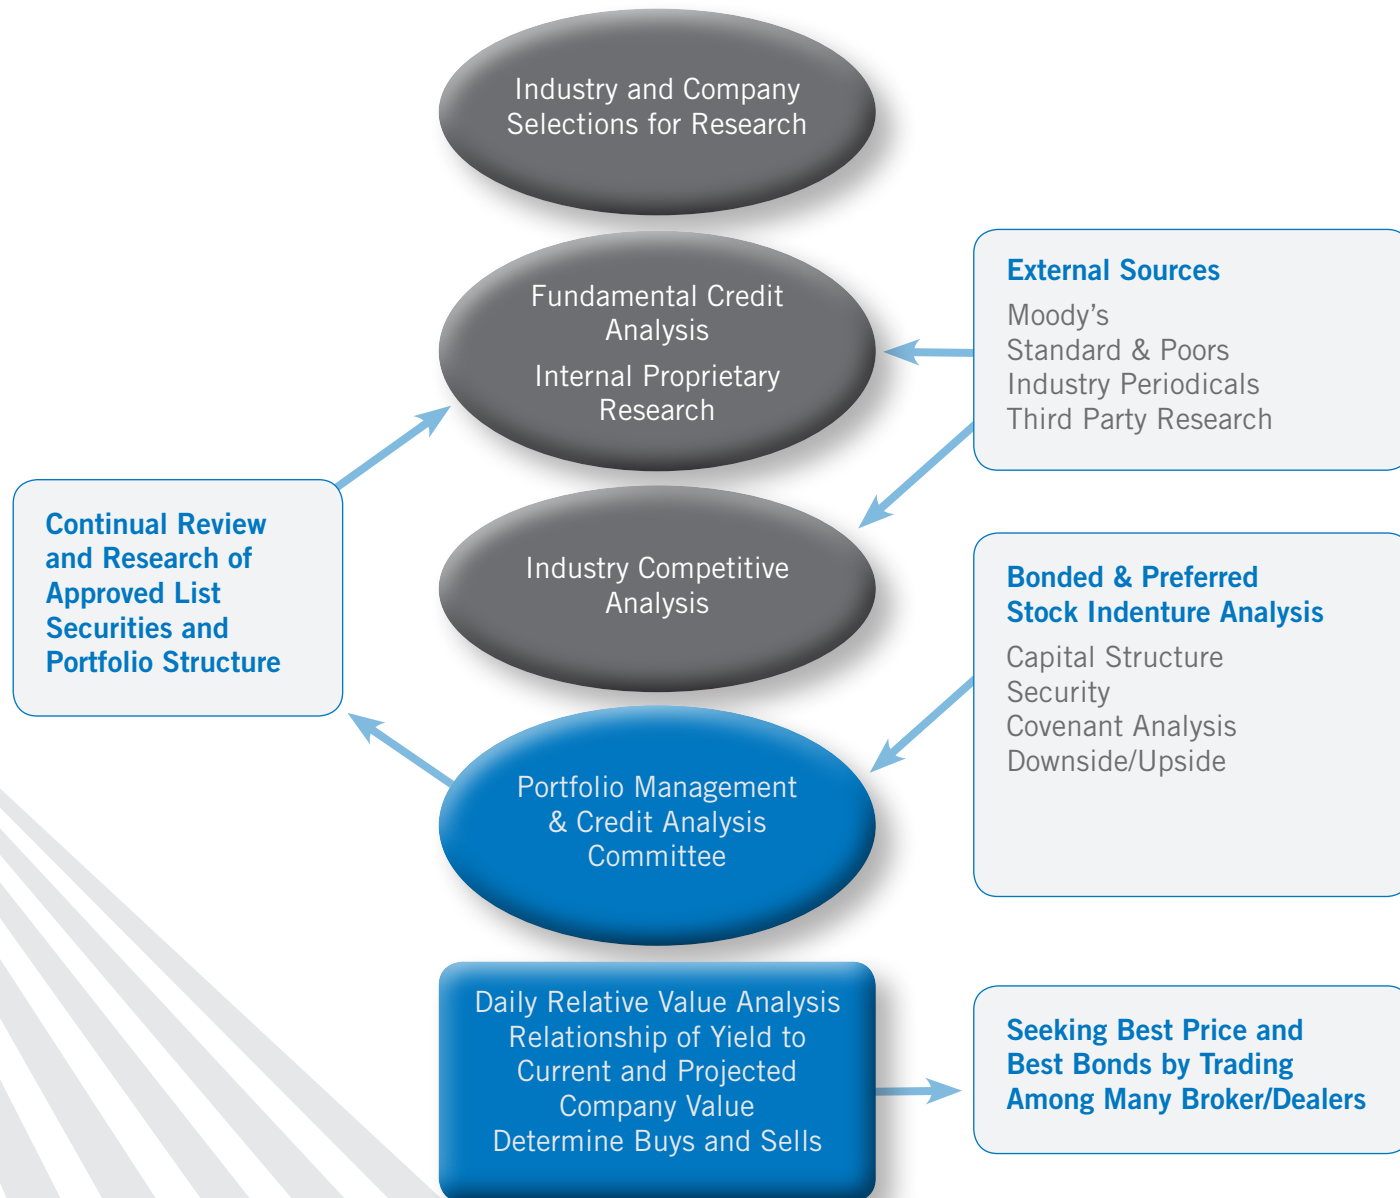

The portfolios are constructed and managed through our proprietary analytical discipline that measures the yield of a security to our assessment of that security’s quality.

Selections to buy and sell are made on the basis of the constant comparison of the bond issues of companies on our “focus list.”

In this discipline, we are looking for a higher yield relative to our quality assessment.

The constant objective is to improve the quality, increase the yield and shorten the maturity.

1.4. Credit Research and Portfolio Management Process

1.5. Risk Management

Our investment strategy utilizes a bottom-up value discipline. Risk management is an integral part of the investment process. This is important given our primary objective of preservation of capital. In addition to security selection, risk management is employed through portfolio diversification, liquidity and constant monitoring of individual credits.

Liquidity and safety are enhanced by investing only in bonds with an initial issue size generally in excess of \$100,000,000.

In efforts to mitigate risk, portfolios are constructed with a maximum exposure of approximately 15% per industry².

Individual credits are monitored continuously; a deterioration of 10%, relative to the index, from initial purchase triggers a mandatory credit review in which appropriate action is promptly determined.

Within the High Yield portion of Short Duration:

Individual credits are monitored continuously; a security price decline of approximately 15% relative to the broader benchmarks triggers a mandatory Credit Committee review. This action will result in a hold or sell decision. Should a price decline by approximately 25% or more, relative to broader benchmarks, that position will be sold.

² 30% limitation to the Financial Institutions within the investment grade universe due to the size of the sector versus the overall market.

2. Short Duration Portfolio

2.1. Overview

The strategy is designed for investors interested in a shorter maturity profile which blends a fixed allocation of 50% Investment Grade and 50% High Yield in one portfolio.

A bottom-up approach identifies investment opportunities that represent the most attractive value with strong prospects for consistent income and growth.

Liquidity and safety are enhanced by investing only in bonds with an initial issue size generally in excess of \$100,000,000.

The **overall** average credit rating objective is **BBB-** with a duration target of 3.

The portfolio is **diversified** across 20 – 30 equal weighted issues and generally limited to a maximum of 15% per industry sector.

A Trading Network provides all our clients with best pricing. We access over 30 institutional broker/dealers seeking competitive bids and offerings.

2.4. Relative Performance Attribution

For the 3-months, we trailed the Barclays Weighted Intermediate benchmark (-0.05% vs. 0.15%). Our Strategy targets a BBB-/Baa3 average credit rating, and we arrive at that by buying higher yielding BB and B rated securities and offsetting that with primarily A rated investment grade bonds. As a result, the Strategy tends to be underweight BBB rated securities, which comprise approximately 43% of the Bloomberg Barclays US Credit Intermediate Index. BBB rated securities outperformed the overall Index during the period, and as a result, our performance was negatively impacted by 3 basis points. With respect to the High Yield portion of the Strategy, we do not purchase securities rated CCC by either S&P or Moody's and that credit subsector, which comprises approximately 17% of the Bloomberg Barclays High Yield Intermediate Index. That subsector outperformed the Index, and as a result, our performance was negatively impacted by 10 basis points.

2.4. Relative Performance Attribution

For the 12-months, we trailed the Barclays Weighted Intermediate benchmark (3.84% vs. 4.65%) primarily as the result of our underweighting of BBB rated bonds and our lack of exposure to bonds rated CCC by either S&P or Moody's.

The chart provides the annual ranking of various fixed income classes in terms of total return performance.

Over the period of 2002 through 2017, High Yield Bonds were one of the best performing fixed income sectors, in nine of fifteen years. Also, in a number of years, their performance ranking is the opposite of that of Investment Grade Corporates and U.S. Government Bonds. Including the asset class in a portfolio provides value both in terms of return potential and diversification.

D. Benefits of Employing a Bond Manager

CREDIT ANALYSIS

We buy bonds of companies whose credit quality is stable to improving. Continuous monitoring of the corporation's credit quality is imperative to determine when a bond's price no longer reflects its actual credit quality.

CONSISTENT APPLICATION OF AN INVESTMENT STRATEGY

Our relative value approach to buying and selling bonds meets defined objectives of intermediate maturity and best value, as well as broad diversification of holdings.

BUYING/SELLING IN THE OVER-THE-COUNTER MARKET

The bond market is an over-the-counter market that requires knowledge of historical pricing and the different bid/ask quotations of the many different market makers. Investment grade and high yield corporate bonds cover over 20,000 separate issues of over 2,000 companies; inventories are exclusive, or vary, among brokers, so having the ability to trade with best execution with many different brokers is imperative to achieving better portfolio performance.

EXECUTING IN SIZE

It is not unusual to observe significant price disparities between smaller retail executions and larger block trades. We buy/sell for all our clients in sufficient quantity in one trade to satisfy the needs of all our clients' portfolios; the smaller retail investor participates at the same price as the larger institutional client when a transaction is effected.

A copy of the ADV, verified GIPS Compliant Performance Presentation, and References are available upon request.

Cincinnati Asset Management, Inc., (“CAM”) was established in 1989 as a registered investment adviser with the United States Securities and Exchange Commission specializing in U.S. dollar denominated fixed income investments. CAM is an independent privately held corporation. CAM claims compliance with the Global Investment Performance Standards (GIPS®). Please contact us at the number referenced herein to obtain a compliant presentation or a list of composite descriptions. Performance examinations were conducted on the High Yield, Investment Grade and Short Duration composites for the period January 1, 2006 through December 31, 2016 by Ashland Partners & Company LLP and for prior periods by previous independent verifiers. The Broad Market composite has been examined by Ashland Partners & Company LLP for the period January 1, 2007 through December 31, 2016. The Short Duration – IG Only composite has been examined by Ashland Partners & Company LLP for the period December 1, 2008 through December 31, 2016. Copies of the verification reports are available upon request.

The High Yield composite includes investments with credit ratings which average B2/B with average maturity of six to eight years. The Investment Grade composite includes investments in fixed income securities with credit ratings averaging A3/A- with at least one investment grade credit rating and an average maturity of five to ten years. The Short Duration composite includes investments in fixed income securities with credit rating averaging Baa3/BBB- and a target duration of three years. The Broad Market composite includes investments in fixed income securities with credit rating averaging Baa2/BBB, an average duration of six years and an average maturity of eight years. The Short Duration-Investment Grade Only composite includes investments in fixed income securities with credit ratings averaging A3/A- with at least one investment grade credit rating and an average maturity of three to five years.

The Adviser’s High Yield, Investment Grade, Short Duration, Short Duration – IG Only and Broad Market investment performance data conform to the following standards from April 1, 1989, January 1, 1993, June 1, 2004, December 1, 2008, and January 1, 2002, respectively:

- a) *The composites consist of all discretionary portfolios in each respective style under management, including all securities and cash held in the portfolios, appropriately weighted for the size of the portfolios. All portfolios are included after three months under management or upon reaching 65% invested by CAM, whichever occurs first.*
- b) *Returns are calculated monthly in U.S. dollars and include reinvestment of dividends and interest.*
- c) *Gross of fees performance results include all transaction costs and exclude management fees. When performance is compared to Lipper mutual fund averages gross performance net of CAM’s management fees is used.*
- d) *For the period from April 1, 1989 through 1992, the High Yield composite includes all assets of all accounts that meet the above criteria, except that not all accounts were added to the composite by the beginning of the third full reporting period for which the account was under management. In addition, prior to 1990 certain diversification requirements were not met.*

The indices shown for comparative purposes are based on or derived from information generally available to the public from sources believed to be reliable. No representation is made to their accuracy or completeness.

“Gross Yield Comparisons”: CAM yields are for client account purchases over the last thirty days, gross before the impact of fees or expenses.

Past performance should not be taken as an indication of future results.

High Yield bonds may not be suitable investments for all individuals.

This presentation is for informational purposes and is not an offer to solicit the purchase or sale of securities.
